PROFESSIONAL SUMMARY

Detail-oriented with hands-on software development experience spanning **Java, Python, React.js,** and cloud **database management.** Proven track record of designing full-stack web architectures, IoT automation systems,relational database indexing, and end-to-end product deployment seeking an entry-level Software Developer role.

EDUCATION

Master of Computer Applications (MCA)
Mepco Schlenk Engineering College | Graduation: 2027
CGPA: 7.00 (upto 2nd Semester)

Bachelor of Science in Computer Science (B.Sc)
Kalasalingam University | Graduation Year: 2025
CGPA: 7.79

HSC
MSR Matriculation Hr.Sec.School | Graduation Year: 2022
Percentage: 74%

SSLC
MSR Matriculation Hr.Sec.School | Graduation Year: 2020
Percentage: 92.6%

CORE COMPETENCIES & TECHNICAL SKILLS

- Programming Languages: Java | Python | PHP | SQL | JavaScript
- Web & Frontend Frameworks: React.js | HTML5 | CSS3 | Flutter (Basics)
- Databases & Backend Tools: MongoDB | MySQL | Node.js | Express.js
- Development Tools & DevOps: GitHub | Figma | Canva | Postman | VS Code
- Cloud & IoT: Arduino | ESP8266 | Ultrasonic Sensors
- SoftSkills: Team Collaboration | Communication | Time Management

---

TECHNICAL PROJECTS

Event Hub – College Event Management System | Full-Stack Developer

- Developed a full-stack event management platform using React.js and MongoDB for event scheduling and student registrations.Implemented QR-based attendance tracking and role-based authentication for secure access. Integrated automated NodeMailer/PHP email notifications, reducing manual announcement overhead by **40%** and ensuring **100%** on-time registration alerts.

AI-Powered Cloud Platform for Healthcare Diagnosis | IoT & AI Developer

- Developed an IoT-based healthcare monitoring system using Arduino and ThingSpeak for real-time patient data tracking.Implemented a Decision Tree machine learning model achieving a **94% accuracy rate** for real-time fall detection and patient health status analysis.Integrated automated emergency alert notifications to improve patient safety and remote monitoring.

FoodHub – End-to-End Food Delivery Web Application | PHP | MySQL | HTML5 | CSS3 | JavaScript

- Built a multi-vendor food delivery management platform with customer ordering, restaurant administration, delivery tracking, payment management, and role-based dashboards using **PHP, MySQL, JavaScript, and REST APIs**.

Book Heaven – Online Book Store Management System | PHP, MySQL, HTML5, CSS3, JavaScript

- Developed a dynamic online bookstore website that allows users to browse books, search products, manage shopping carts, and place orders. Implemented **PHP-based backend** functionality with **MySQL database integration** for efficient book management, user authentication, and order processing.
